Eight layers of Right Protection for autonomous AI agents.

Every feature OpenClaw offers — rebuilt with security from day one.

THE PROBLEM

- **CVE-2026-25253**

1-click RCE via WebSocket hijack

- **341 Malicious Skills**

ClawHub open to credential-stealing malware

- **\$750/mo Waste**

Uncontrolled heartbeat API costs

- **1.5M Agents/17K Humans**

Zero identity verification on Moltbook

- **Gartner + China NVDB**

"Unacceptable cybersecurity risk"

THE SAMMA SUIT — EIGHT LAYERS OF RIGHT PROTECTION

- | | |
|---------------------|---|
| ● 1. SUTRA | Gateway — origin validation, TLS 1.3, WebSocket auth |
| ● 2. DHARMA | Permissions — role-based agent scoping |
| ● 3. SANGHA | Skill Vetting — scan, sandbox, review before install |
| ● 4. KARMA | Cost Controls — per-agent budgets, token optimization |
| ● 5. SILA | Audit Trail — activity logging, anomaly detection |
| ● 6. METTA | Identity — cryptographic agent signing |
| ● 7. BODHI | Isolation — process sandboxing, egress allowlists |
| ● 8. NIRVANA | Recovery — state snapshots, kill switches, rollback |
